

❖ Soft Muon Tagger based on a “Global χ^2 ” to identify muons:

- “Global χ^2 ” combines information from muon matching variables
- There is no calorimetry or isolation requirements

❖ b-tagging with SLT μ :

- Track with $dR_{\text{slt-jet}} < 0.6$, $|dZ_{\text{slt-Z}_{\text{vtx}}}| < 5\text{cm}$ & $p_T > 3\text{GeV}/c$ are considered by the SLT μ tagger
- An event is tagged if @ least one SLT μ tag is found
